

Using a REELEX® Box

04/17/09

Step by Step Instructions on REELEX II Package Use

Normal REELEX Use:

1. Position the box so that the payout hole (perforated circle) is facing UP.

2. Push one finger through the semi-circle perforation in the middle of the larger perforated circle.

3. Pull the entire circular perforation off and discard. This will expose the payout hole.

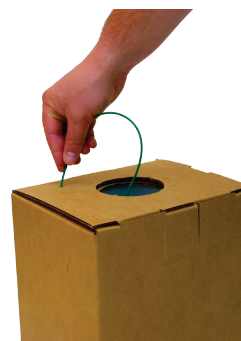

4. The product should be easily available. If you do not see the product, see "if the product falls back into the hole". Typically, the outside end is tucked beneath the outermost box panel. Pull this end from underneath the box panel.

5. Pull as much product as you require for your run.

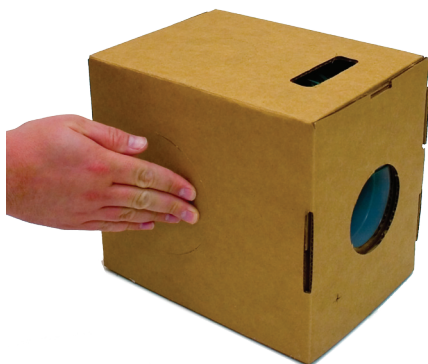

6. When you have enough product for your run, make your cut while holding the product between your cut and the package. This will ensure the product does not fall back into the payout hole.

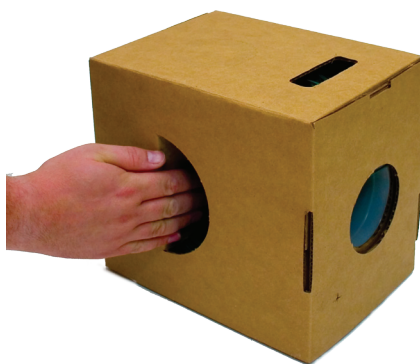

7. To secure the product when not in use, there is an "X" cutout in the outer panel of the box where the end of the product can be placed. Push the outer end of the product into this "X" to secure.

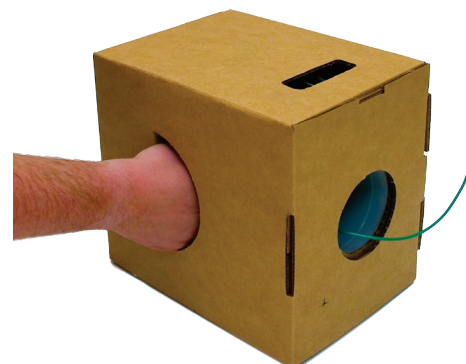

If the Product Falls Back into the hole:

1. On the side of the box, there is a semi-circular perforation. This perforation is designed so that the center of the coil is accessible without opening the box.

2. Push the perforation into the box. You can now look inside the center of the REELEX coil.

3. Feel around and find the inside end of the product. It should be the "loosest" of the inside loops. Push the inside end back through the payout tube and resume use.
